**Waterproof and preserve exterior doors and windows — Circle 150**

Doorbrim announces the first in a series of protective devices developed to extend the life and cosmetic appeal of exterior doors, jambs and hardware. Originally designed for heavy-duty commercial use, Doorbrim provides a simple shield for the top and upper sides of the door, diverting rain and snow safely away from the areas vulnerable to the intrusion of water and the possible development of mold under certain conditions. It also protects window openings while

allowing windows to be left open for ventilation during light rains.

Constructed in the USA of durable and recyclable ABS plastic, the Doorbrim can be installed over new or

existing doors and adaptable to many building surfaces including aluminum, vinyl, steel, wood, stucco or concrete. It is available in two thicknesses, .187 inches and .250 inches, and sized to fit over a standard 36-inch wide commercial exterior door or window, giving approximately a 6-inch overlap or extension on each side. The units are available unfinished or in pre-finished colors of white, beige and gray.

**Swing-up center post for doors — Circle 151**

Designed to allow two doors to be used to enclose an exceptionally wide opening (up to 50 feet wide), the new C.H.I. Swing Up Center Post is a universal center post allowing it to swing either left or right from a single pivot point as standard from the factory. Its design is leaner than most current designs, making it easier to handle and install yet it is strong enough to handle commercial or industrial loads. It features an easy-to-use positive floor latching system that is both strong and dependable. The C.H.I. swing-up center post and track will be powder-coat painted to match the door's exterior color.

**New profile for rooflights and retrofits — Circle 152**

A new mini wave polycarbonate profile, the Sunsky Mini, is available only through Palram. The Sunsky Mini is primarily used for rooflights and retrofits to replace fiberglass either in conjunction with metal materials or alone. This profile, previously available in only metal or fiberglass, will expand the possibilities for use in interior and exterior applications, including daylighting options.

The standard dimensions for the Sunsky Mini are 26 inches wide x 12 foot lengths, with a 3/8-inch rib height and 24-inch coverage. The profile is available in Clear.
